

Project Problem Statement

Student Name: Mukesh

Matric Number: A221098

Project Title: FlashTech (A221098_Mukesh_MrNelson_Project1)

1. SDG Focus

This project aligns with **SDG 4: Quality Education**. Specifically, it targets **Target 4.4**, which aims to increase the number of youth and adults who have relevant skills for employment and entrepreneurship by improving learning efficiency through technology.

2. Problem Statement

Students and lifelong learners often face "Information Overload" when studying technical subjects. Standard note-taking lacks a prioritization system, making it difficult for learners to identify which topics require more focus. Without a way to estimate the effort needed for a study session, learners often fail to manage their time effectively, leading to poor educational outcomes.

3. Proposed Solution (App Idea)

The **FlashTech** app provides a high-fidelity digital learning environment. The solution allows users to:

- **Digitize Notes:** Convert complex topics into manageable flashcards.
- **Prioritize Learning:** Assign a priority level (1–5) to each card based on difficulty.
- **Time Management (Data Processing):** The app automatically calculates an "Estimated Study Time" based on the total weight of the card priorities.
- **Organized Retrieval:** Use real-time search functionality to quickly access specific study materials, ensuring a focused and efficient learning experience.
